

Caradigm™ Care Management

Caradigm's solutions help healthcare organisations connect systems and aggregate data across the community, gain insight through near real-time analytics, accelerate caregiver access to data, maintain regulatory compliance and rapidly implement new applications to support population health. With a robust platform and application ecosystem, Caradigm enables the cross-boundary collaboration necessary to unleash innovation, unlock insight and transform care.

Unleashing Innovation

Caradigm aims to help healthcare organisations address the needs of population health management by developing solutions that enable collaboration among the care team and coordination across the continuum of care. These solutions enable comprehensive, effective management at a population level and smooth coordination for individuals—by improving the patient experience of care, improving the health of populations and reducing the per capita cost of healthcare:

- Tools to collaborate on personalised plans of care
- Evidenced based care pathways that identify gaps in care in near-real time and recommend mitigations
- Information to enable timely and appropriate interventions to reduce unnecessary utilization

Unlocking Insight

Care Management assists healthcare organisations in streamlining management of their patient populations and enabling more efficient use of evidence-based medicine across their community. This application marries care pathways with an aggregated, cross-community record that presents the provider with the most relevant information from clinical and administrative records all in one place.

Built for managing patient care, the application enables a user to understand individuals and their health issues and to target specific interventions or bundles of services to improve patient health. Clinicians and managers can synthesise the services into care pathways using tasks and electronic form-based workflows.

This allows interpretation of a clinical protocol into clinical and business rules orchestrated by a business process management engine.

Key Features

- Population Stratification
- Cohort Identification
- Automated Patient Identification & Referral Management
- Clinical Screening
- Program Enrollment with Patient Consent
- Comprehensive Assessment(s)
- Personalised, Data-driven and Dynamic Plans of Care
- Care Management Dashboard
- Tools for Care-team Collaboration
- Automated, Event-based Tasking
- Ongoing Patient Management with Evidence-based Workflows
- Clinical Episode Closure

Caradigm™ Care Management

Care Management incorporates a dynamic, data-driven plan of care that represents the patient's problems, goals and interventions and their relationship to one another. It includes automated, event-based tasking – enabled by data ingestion from external sources – that assists in tracking progress to goals and managing barriers.

Built on the Caradigm Intelligence Platform, this application leverages clinical, administrative and demographic data from across the community to automatically stratify and assign patients at risk.

Transforming Healthcare

With the support of IT solutions, healthcare organisations can achieve effective population health management. By increasing access to patient and population data from across care settings and providing better facilitation of communication among members of the care team – including the patient – Caradigm Care Management will:

- Enable informed decision-making with comprehensive, cross-community views of patient data
- Allow clinicians to provide proactive intervention
- Improve coordination of care
- Increase patient engagement
- Enhance outcomes
- Help organisations more predictably manage cost and risk

By enabling organisations to improve the quality of care, and showing them not only what has been done but how it has been done most efficiently, they are empowered to implement their own best practice as the standard protocol across the enterprise.

Our portfolio of solutions provides the insights healthcare organisations need to better manage clinical outcomes and financial performance now – and in the future.

ABOUT CARADIGM

Caradigm is a health IT company formed by GE Healthcare and Microsoft in 2012. The joint venture is a healthcare analytics and population health company dedicated to helping organisations improve care, reduce costs and manage risk. It combines the power of an open technology platform and collaborative clinical applications to bring together disparate patient data and transform it into intelligence as well as driving efficiencies in how clinicians access data.
